Summary

architecture	SLatFlowModel
blocks / model_channels	30 / 1536
in / out channels	32 / 32
base dtype	bfloat16
total parameters	1,310,931,488
TRAINABLE parameters	18,677,760 (1.425 %)
frozen parameters	1,292,253,728
parameter tensors	1,060 (420 trainable)
LoRA	rank 16, alpha 32, 210 adapted modules, fp32 adapters

Non-block layers (10 tensors) - all frozen

Structure verified programmatically: every one of the 30 blocks has the same 35 tensors with identical names, shapes, dtypes and trainable flags. 14 of the 35 train (the 7 LoRA-adapted modules x A+B), giving 622,592 trainable of 43,130,368 parameters per block. The complete per-tensor listing for all 1,060 tensors is in report/model_layers.json.
